通讯协议

船 厂： 青岛武船重工有限公司

Shipyard:

船 名： 86000 吨散货船

Vessel: 86000DWT BULK CARRIER

规范：IEC61162-1

波特率 4800 ,n,8,1

'液位数据

'格式: \$HLALR,<时间>,<编号>,<报警态>,<确认态>,<报警类型><液位值>/越控信息*<校验码><回车换行>

' \$HLALR, ,01 ,V ,A ,SA 00.00 /00 (00 表示正常, 01 表示越控) *5D

'编号:00--15

'报警态:A 报警 V 不报警

'确认态:A 确认 V 未确认

'报警类型:SA 故障报警 HA 高报警 LA 预报警 NM 正常, 其中越控信息为: 00 表示正常, 01 表示越控。

'液位值:格式**.**

'校验码:从\$到*号之间不包括\$和*,各字节依次异或,其十六进制结果转为 ASCII 显示

例:

\$HLALR,,01,V,A,SA11.11/01*70

含义为: 01 舱, 无报警, 已确认, 传感器故障, 液位 11.11 米, 该舱越控

\$HLALR,,01,V,A,SA12.34/00*74

\$HLALR,,01,A,V,SA12.34/00*74

\$HLALR,,01,A,A,SA12.34/00*63

\$HLALR,,01,V,V,SA12.34/00*63

该仪表同时采集 15 路数据, 数据发送如下

\$HLALR,,01,V,A,SA11.00/00*5D

\$HLALR,,02,V,A,SA00.00/01*5E

\$HLALR,,03,V,A,SA00.00/00*5F

\$HLALR,,04,V,A,SA00.00/00*58

\$HLALR,,05,V,A,SA00.00/00*59

\$HLALR,,06,V,A,SA00.00/00*5A

\$HLALR,,07,V,A,SA00.00/00*5B

\$HLALR,,08,V,A,SA00.00/00*54

\$HLALR,,09,V,A,SA00.00/00*5A

\$HLALR,,10,V,A,SA00.00/00*5B

\$HLALR,,11,V,A,SA11.00/00*5D

\$HLALR,,12,V,A,SA00.00/00*59

\$HLALR,,13,V,A,SA00.00/01*5E

RONGDE

附件

\$HLALR,,14,V,A,SA00.00/00*5B

\$HLALR,,15,V,A,SA11.00/00*5D

到 VDR 的通讯编号对应的舱名:

- 01: 艏尖舱 (当数据格式中的越控信息为 01 时就是越控)
- 02: 4 号货舱 (当数据格式中的越控信息为 01 时就是越控)
- 03: 水手长室 (右)
- 04: 空舱
- 05: 甲板储藏室
- 06: 木工间
- 07: 油漆间
- 08: 1 号货舱
- 09: 2 号货舱
- 10: 3 号货舱
- 11: 水手长室 (左)
- 12: 5 号货舱
- 13: 6 号货舱
- 14: 6 号货舱
- 15: 电源故障 (当数据格式中的报警态为 SA 时就是电源故障报警)

Norm: IEC61162-1

Baud rate 4800 ,n,8,1

'Level data

'Format: \$HLALR,<time>,<number>,<alarm situation>,<acknowledge situation>,<type of alarm><level value>/<override>*<check code><new line>

' \$HLALR,,01,V,A,SA00.00/00(00:normal,01:override)*5D

' number:00--15

' alarm situation: A: alarm V: no alarm

' acknowledge situation: A: ackn. V: no ackn.

' type of alarm: SA: system failure HA: main alarm LA: pre alarm NM: normal override

situation:00-normal,01-override

' level value: Format **. **

' check code : from \$ to * except \$ and *, each byte exclusive or in turn, shift from the result of hex to ASCII

For example:

\$HLALR,,01,V,A,SA11.11/01*70

means: 01 C/H, no alarm, acknowledged, sensor failure, level data is 11.11m, override 20m

\$HLALR,,01,V,A,SA12.34/00*74

\$HLALR,,01,A,V,SA12.34/00*74

\$HLALR,,01,A,A,SA12.34/00*63

\$HLALR,,01,V,V,SA12.34/00*63

The meter collected 15 channels data at one time, it send as follows

\$HLALR,,01,V,A,SA11.00/10*5D

RONGDE

\$HLALR,,02,V,A,SA00.00/10*5E
 \$HLALR,,03,V,A,SA00.00/10*5F
 \$HLALR,,04,V,A,SA00.00/10*58
 \$HLALR,,05,V,A,SA00.00/10*59
 \$HLALR,,06,V,A,SA00.00/10*5A
 \$HLALR,,07,V,A,SA00.00/10*5B
 \$HLALR,,08,V,A,SA00.00/10*51
 \$HLALR,,09,V,A,SA00.00/10*52
 \$HLALR,,10,V,A,SA00.00/10*53
 \$HLALR,,11,V,A,SA11.00/00*5D
 \$HLALR,,12,V,A,SA00.00/00*59
 \$HLALR,,13,V,A,SA00.00/01*5E
 \$HLALR,,14,V,A,SA00.00/00*5B
 \$HLALR,,15,V,A,SA11.00/00*5D

Alarm list with VDR:

- 01: F.P.T. (when the override situation of format is 01, means override this tank)
- 02: 4# C/H (when the override situation of format is 01, means override this tank)
- 03: BOSUN STORE(S)
- 04: VOID SPACE
- 05: DECK STORE
- 06: CARPENTRY RM.
- 07: PAINT RM
- 08: 1# C/H
- 09: 2# C/H
- 10: 3# C/H
- 11: BOSUN STORE(P)
- 12: 5# C/H
- 13: 7# C/H
- 14: 8# C/H
- 15: POWER FAILURE (when the alarm situation of format is SA, means power failure) 9# C/H
